
PPN Portal

The Clinical Intelligence Platform for Psychedelic Therapy.

JetBrains Mono
Psychedelic Practitioner Network Research

Operating in the dark carries existential risk.

Legal Exposure

Am I reckless?
(Subpoenas/DEA)

Clinical Isolation

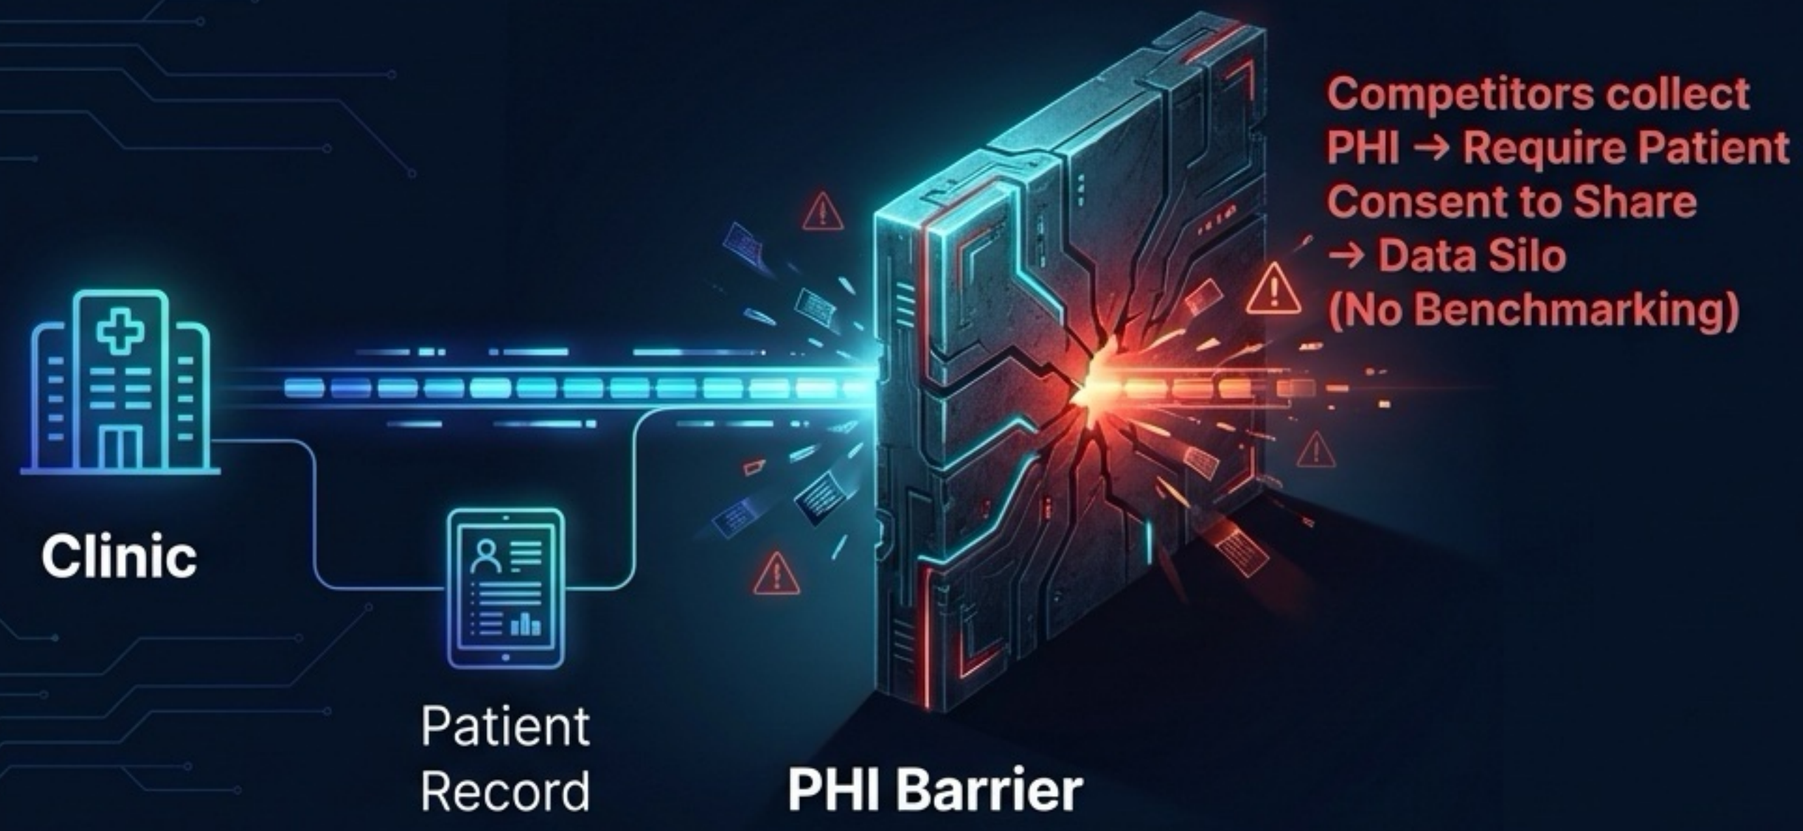
How do my outcomes compare?

Financial Risk

One breach costs $10.8M

Without network data, every clinic is an island.
You cannot prove you are operating within the standard of care if you cannot see the standard of care.

The ‘EHR Trap’ creates data silos and liability.



93%

of healthcare orgs breached in last 3 years.

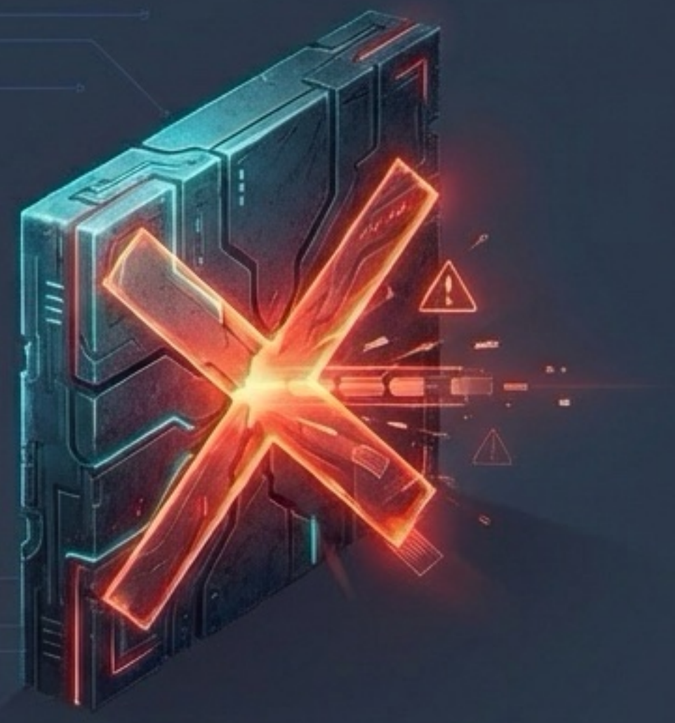
$1.7M

compliance cost over 5 years.

Collecting patient names prevents you from learning from the network.

The Solution: Clinical Intelligence, Not Electronic Health Records.

We replaced PHI liabilities with Network Intelligence.



PHI Architecture

High Liability. Walled Gardens.
Slow Innovation.

No-PHI Architecture

Zero Liability. Network Benchmarking.
Collective Intelligence.

See what works. Before you treat.

Evidence-Based Decision Support.

- Protocol Safety Analysis
- Real-time Risk Assessment
- De-identified Data Aggregation

Strategic Brilliance, Not Overcaution.

Legal

Zero breach risk.
Subpoena-proof.
(A subpoena returns 50 protocols, 0 names).

Financial

$1.7M saved over 5 years. (Compliance costs = $0).

Privacy

Enables the one thing competitors can't do: **Benchmarking.**

Why Competitors Can't Copy Us.

Them (Osmind/EHRs)

Must ask every patient for consent to share data = **Impossible to scale.**

Us (PPN Portal)

De-identified protocol data flows freely = **Instant Network Benchmarking.**

Our architecture allows data to move. Theirs requires it to stay still.

Use Case: Prove You Are Not Reckless.

Target: Entheogenic Religion Operators & Psilocybin Facilitators.

Problem: Law enforcement scrutiny. “Are you an unlicensed therapist?”

Solution: Audit-ready documentation without patient exposure.

Subpoena returned 50 protocols, 0 names. Operation saved.

Use Case: Reduce Malpractice Exposure.

Target: Licensed Ketamine Clinics

Problem: "Is my adverse event rate normal?"

Solution: Real-time comparison against the network.

ROI: $50k saved in legal fees.

Use Case: Get Reimbursement Approved.

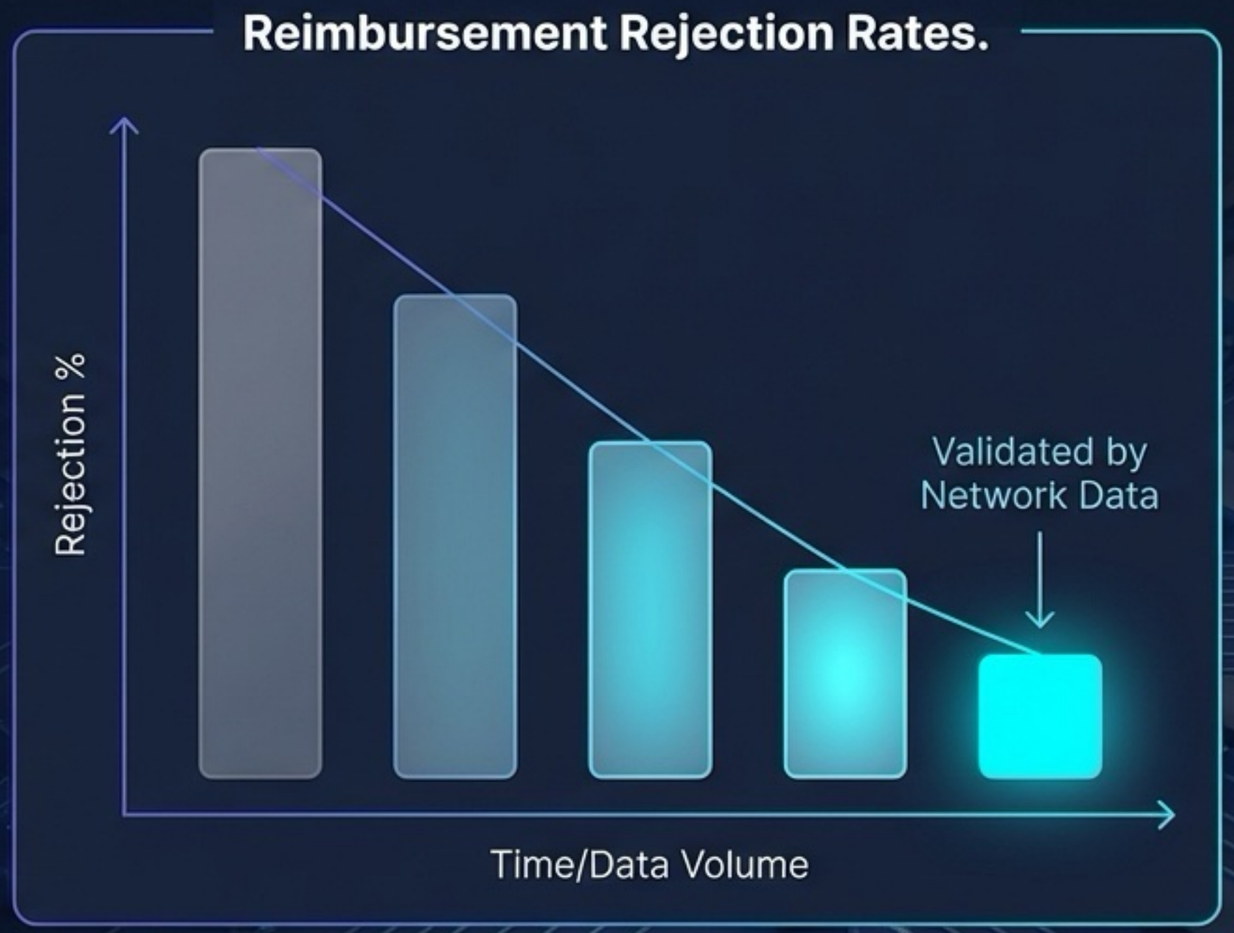
Target: Clinics seeking insurance coverage

Problem: Payers demand proof of safety and efficacy.

Solution: Aggregated network data validates the therapy model.

ROI:

$120k/year revenue increase.



The Business Case for Intelligence.

$50,000 Legal fees saved via audit defense.	**$120,000** Annual revenue increase via reimbursement.
15 Hours Monthly time saved on compliance automation.	**$1.7M** 5-Year savings on HIPAA/PHI compliance costs.

Purpose-Built for Oregon & Colorado.

- Automated state compliance reporting.
- **"One-click" export** for regulators (No PHI exposed).
- Regulators get the **safety data** they need. You keep the **patient identities** private.

Future-Proofing Psychedelic Care.
